# Activity – Vertical Sprite Navigation

The task of this activity is to style a vertical navigation using a sprite image for the page. The finished page will have a rollover effect by moving the sprite when the mouse moves over the navigation item. All the other code has been completed for you.

Example of finished page (with mouse not over the link):

Appearance of a navigation link when mouse is over the 'Solutions' link.

Activity – Vertical Sprite Navigation

Directions:

Style the activity to have a functioning navigation rollover effect using the provided sprite.html, sprite.css and sprite image.

- Add your name to the footer of the page.
- Style the navigation to layout vertically.
- Use the sprite.png image
  - Full width of the image is 440px.
  - Full height of the image is 37px.
- Font color of navigation text is white.
- Make sure the top of the navigation aligns with the top of the column of text.
- Hint: Your book gives code examples for vertical navigation and for using a sprite image with navigation.

When done coding validate your HTML and CSS code.

- Fix any code errors if necessary then re-validate until all is correct.

Upload your work to your student website.

- Add a link to your homepage that will open up the completed work.
- Test your link.

When all is uploaded and functioning, go into Blackboard submission area for this activity and add the URL to the completed work.

Contact the Instructor if you need assistance.
